

Capture the Synergy

Automatic lubricators & industry-proven greases

Smart Tool

Lubrication Engineers makes it easy for you to protect your assets around-the-clock. LE offers a variety of Perma® single-point applicators that deliver precise, timed lubrication without the need for labor-intensive manual lubricant application.

High-Performance Grease

Selecting the right grease to go with your automatic lubricators is easy with LE's complete line of high-performance industrial greases designed to meet your toughest lubrication challenges. Whether you need an electric motor, all purpose, food grade or high-temperature lubricant, LE has a solution for you in our line of technologically advanced greases – including versatile, heavy-duty and extreme pressure (EP) formulas. Perma lubricators are available with many of LE's lubricants, including the popular greases shown on the back of this flyer.

Benefits

- Reduced wear
- Reduced operating temperatures
- Longer equipment life
- Enhanced performance
- Increased efficiency
- Increased uptime
- Lower grease consumption
- Longer service intervals
- Reduced maintenance

Choose Your Lubricant

Perma lubricators are available with several LE lubricants, including these popular greases

LE greases are formulated for a variety of industries and applications to provide protection for components such as bearings, bushings and chassis. All LE greases – including those shown below – outperform conventional greases.

Electric Motor

- Monolec® Extend EM Grease (1282) – *Polyurea grease prolongs bearing life*
- Monolec® Multiplex Lubricant (4622) – *Lithium complex grease with excellent low-temperature pumpability*
- Almaplex® Industrial Lubricant (1275) – *Aluminum complex EP bearing lubricant*

All Purpose / Chassis

- Almaplex® Industrial Lubricant (1274-1275) – *Aluminum complex EP bearing lubricant*
- Almagard® Vari-Purpose Lubricant (3751-3752) – *Long-lasting lithium complex EP grease stays put & runs cool*
- Monolec® Industrial Lubricant (4701-4702) – *Aluminum complex EP grease designed especially for centralized lubrication systems*
- Monolec® Multiplex Lubricant (4622) – *Lithium complex EP grease with excellent low-temperature pumpability*

Food Grade / NSF H1

- Quinplex® Food Machinery Lubricant (4024-4025) – *Semi-synthetic aluminum complex EP grease that won't wash out, pound out, or melt and run under severe conditions*

High Temperature

- Almasol® High Temperature Lubricant (1250-1251) – *"The bearing lifesaver," an inorganic-thickener grease that won't melt or run out, providing constant lubrication under high temperatures*
- Almaplex® Ultra-Syn Lubricant (1298-1299) – *Synthetic aluminum complex EP grease performs in extreme conditions*
- Almasol® Syntemp Lubricant (9901) – *Heavy-duty synthetic bentone-thickener grease designed for high-temperature applications*

The greases listed above are our most popular lubricants sold with Perma lubricators, but several others are also available. For more information about LE greases, including NLGI grades, please contact your local LE consultant or visit www.l Lubricants.com/industrial-greases.html.
